Memory Improvement  
Through Nicotine Dosing

**866-MIND-150**  
**MINDstudy.org**

The Memory Improvement Through Nicotine Dosing (MIND) study will determine whether daily transdermal nicotine will have a positive effect on early memory loss in people diagnosed with MCI.

### **We need your help.**

If you are a healthy, non-smoking adult age 55+ and are interested in learning more about this study, please visit **MINDstudy.org** or call **866-MIND-150**.

There is no cost to participate.
